Trijicon RCR® Red Dot Sight

SKU: RCR1-C-3300001

Description

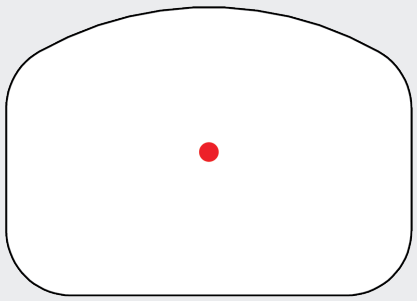

The Trijicon RCRÂ is designed to improve precision and accuracy with any style or caliber of firearm in any type of environment. Built from 7075-T6 aluminum hard coat anodized, the RCR can withstand direct impact, while providing excellent field of view. The Trijicon does not require additional or new plates to be used as it works with the current RMR bolt pattern and direct mount, while also fitting with RMR compatible Iron Sights. Its CR2032 battery offers up to 6 years of continuous operation for maximum durability.

Features

The Trijicon RCR features the patented RCR mounting bolts to provide a durable and easy mounting solution that prevents over torque, cross threading, and stripping out of the screw. The housing shape diverts the force of an impact away from the lens, greatly increasing drop survivability and one-handed slide manipulation as well as keepingÂ out the elements. Ruggedized battery contacts and electronics ensure performance and survivability in harsh environments, with distinctive and easy-to-use adjustment buttons. The true-color, multi-coated lens creates a wide-band light transmission ensures minimal change in target area color.

Specifications

Dimensions	1.8 x 1.2 x 1.3 in
Magnification	1x
Reticle Color	Day : Red Night: Red
Testing	Immersion tested to 20m, Solid Zero 5,000 consecutive rounds of heavy recoil , vibration tested, drop tested 2m, extreme environment tested -20F to 140F.
Illumation Source	LED
Adjustment	1 MOA per click.
Field of View	N/A
Weight	55.28g
Mount	N/A
Finish	Matte Black
